

Giving You the Controls to Drive Your Interface Connections

Hospitals depend on sharing information between their applications to improve patient care, support business processes, and achieve Meaningful Use compliance under ARRA. Applications and information systems no longer act alone. Information must be sourced from, and presented to, a number of applications in real time – be they financial, clinical, or administrative.

The Solution

FA Connections Engine is an affordable solution designed to simplify the development, configuration, and maintenance of your interfaces – invaluable during a heightened time of health data interoperability. Information is delivered with speed, reliability, and accuracy. Furthermore, this MEDITECH-endorsed solution can be deployed and managed in-house or by Forward Advantage.

In-House Monitoring and Troubleshooting

FA Connections Engine's Monitor was designed with a Web-based interface and includes a comprehensive set of alerts to facilitate monitoring. Users don't have to worry about constantly checking the system, as e-mail alerts notify of any issues. If issues with the system are found, they can be internally resolved directly through the Web-based Monitor.

A Deployment Designed to Meet Your Needs

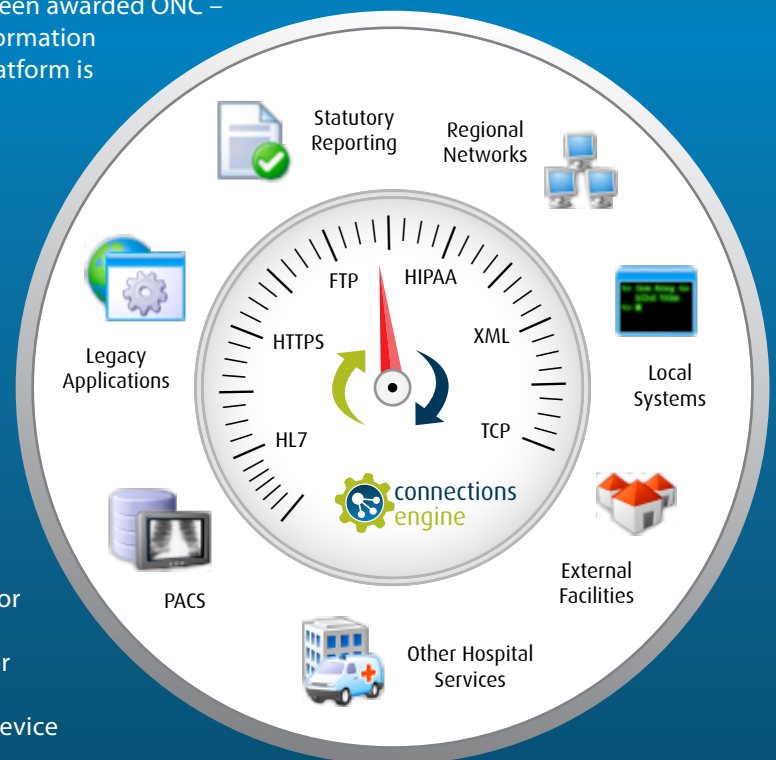

For customers that choose an in-house set-up, FA Connections Engine's intuitive, drag-and-drop development environment simplifies the process with a standardized set of interfaces that are configurable according to customer needs. Hospitals with limited to no programming staff will find that HL7 interfaces are no longer intimidating, but manageable. Customers wishing to speed deployment time and preserve in-house resources will find that Forward Advantage's experience and history of successful interfaces with MEDITECH are a strong advantage. Regardless of deployment method, Forward Advantage's highly skilled Migration and Information Services team will be there every step of the way to assist with any training or implementation needs.

Certified for Meaningful Use

FA Connections Engine is built on a platform certified to help healthcare organizations achieve ARRA's Meaningful Use certification. Our healthcare interface engine technology has been awarded ONC – ATBC 2011/2012 certification as a module for EHR or health information exchange solutions. In addition, the FA Connections Engine platform is registered with the FDA as a Class I Medical Device.

Key Features:

- High performance with a low cost of ownership
- Highly configurable with intuitive drag-and-drop interfaces
- MEDITECH interface bundling available
- Self-documenting interface development allows for rapid and efficient transition to support teams
- Built-in system monitoring using a familiar Web-based interface with powerful searching capabilities
- Supports numerous communication protocols and message formats
- Connects a single, inbound feed to an unlimited number of downstream systems
- Supports ARRA health information exchange initiatives for Meaningful Use compliance
- ONC-ATBC 2011/2012 certification as a module for EHR or health information exchange solutions
- Platform is registered with the FDA as a Class I Medical Device
