

The Physician Interoperability Solution Developed with MEDITECH for EMR Data Exchange

If your doctors aren't already demanding data, it's just a matter of time.

As part of MEDITECH's comprehensive interoperability strategy, MEDITECH and Forward Advantage have worked together to develop Data Express. Data Express provides clinical data to your physicians' EMR applications efficiently, reliably and cost-effectively. And for physicians' EMRs with the capability to send HL7 orders, Data Express can receive orders from multiple systems and send them to MEDITECH.

"We are excited about how fast the interface was created and implemented. It is wonderful to receive the medical information so quickly and efficiently." - Dr. Mike Romeo, president and co-founder of Romeo Medical Clinic.

Rapid Deployment

Data Express is preconfigured to accept messages from a set of MAGIC and Client/Server HL7 interfaces developed by MEDITECH including: Lab, Micro, Blood Bank, Pathology and ITS, Radiology, and Departmental. And with its "one-to-many" design and integrated data transformation process for both orders and results, Data Express can significantly reduce the time, effort, and cost of deploying, maintaining, and supporting your interoperability solution. Many of our customers are up and running on Data Express in a matter of just a few weeks!

Resource Advantage

With Data Express, you take advantage of the customer-acclaimed Forward Advantage services team. There's no need to divert your interface resources from other projects, add staff, or delay deployment due to existing project schedules. Our expert resources allow you and your physicians to benefit from Data Express data delivery exchange quickly and efficiently.

Bidirectional and Dynamic

Data Express is designed to provide a streamlined approach to support both inbound and outbound HL7 data exchange with MEDITECH and physician EMRs, including orders and clinical results, and tailored output formats specific to your physicians' EMRs. Additionally, we continue to work with MEDITECH to jointly develop and support updated HL7 interfaces for new standards or data elements, providing you with a dynamic solution to meet your data exchange requirements.

Economic Stimulus

Data Express positions MEDITECH facilities and their physicians to demonstrate "electronic exchange of information" in anticipation of Economic Stimulus funding. And Forward Advantage has always provided a PHI disclosure audit trail to support HIPAA initiatives, also required by the American Recovery and Reinvestment Act of 2009 (ARRA).
