

Imprivata OneSign

Enterprise single sign-on and authentication for secure, No Click Access to patient information

Benefits

- Provides fast, secure access to patient information for every major EHR
- Eliminates passwords, improves security, and supports HIPAA compliance requirements
- Offers the industry's broadest native thin and zero client integration
- Saves providers 45 minutes per shift

Streamline clinical workflows, simplify EHR access

Imprivata has a strong understanding of healthcare's unique IT requirements and offers a broad portfolio of advanced, healthcare-specific solutions that have been successfully deployed worldwide. Imprivata OneSign provides secure and convenient access to Electronic Health Records (EHRs) and patient data, so clinicians can focus on patient care, not technology. With over 4 million providers using Imprivata OneSign® as their preferred solution for single sign-on and virtual desktop access, Imprivata is the recognized healthcare IT security leader.

Increase provider satisfaction, protect patient data

Imprivata OneSign helps hospitals realize and leverage their EHR and virtualization investments, by making patient data accessible to clinicians, securely and conveniently. By removing barriers that frustrate and distract physicians – like repetitive manual logins and complex passwords – Imprivata OneSign saves clinicians valuable time and increases provider satisfaction. In summary, Imprivata OneSign:

- Streamlines clinical workflows by delivering No Click Access® to desktops and applications. With just a tap of a badge or swipe of a fingerprint, providers are instantly logged into their desktop and automatically signed into their applications without typing a single username or password.
- Protects patient data and helps healthcare organizations meet HIPAA compliance requirements by preventing credential sharing, securing Protected Health Information (PHI) on unattended workstations, and enabling easier and more thorough auditing and reporting of workstation and application access.

Recognized as leading provider by

“Imprivata OneSign integrated with desktop virtualization has given clinicians secure and convenient access to patient data wherever and whenever they need it. This has resulted in improved physician satisfaction, increased clinical efficiency and ultimately helped to deliver improved patient care.”

- David Wendt, RPh, CIO,
Franciscan Missionaries of
Our Lady Health System

Key features of Imprivata OneSign

Single sign-on and password management

Studies show that, by eliminating the need to repeatedly type usernames and passwords, providers can save as much as 45 minutes every day¹. Imprivata OneSign supports a broad range of authentication methods and devices, including fingerprint biometrics that can instantly identify providers for desktop access without disrupting their workflows or thought processes. While Imprivata OneSign largely eliminates the need for passwords, if clinicians forget their password, Imprivata OneSign Self-Service Password Management lets them quickly and easily reset it, reducing helpdesk calls and improving overall productivity.

Secure, fast user switching for shared workstations

Shared workstations are common in healthcare settings, but user-specific logins can be time-consuming and frustrating for providers. In the past, organizations have attempted to use generic Windows logins, but these and other workarounds expose various security and manageability issues. Instead, Imprivata OneSign enables secure, fast user switching between concurrent Windows desktops or kiosk workstations, reducing login times, while protecting patient data.

No Click Access to virtual desktops

Imprivata Virtual Desktop Access simplifies and expedites desktop access and application single sign-on for virtualized environments. These time-savings, combined with the roaming capabilities of virtual desktops, deliver convenient mobility for providers. Imprivata Virtual Desktop Access provides API level support for VMware, Citrix, and Microsoft RDS. Imprivata also partners with the leading thin and zero client hardware and device vendors, including Dell Wyse, HP, Samsung, Texas Instruments, and Teradici. Embedding the Imprivata agent at the device level provides an unparalleled level of integration which gives clinicians seamless access to their desktops, clinical applications, and patient data, regardless of the technology environment.

Advanced walk-away security

Imprivata OneSign offers passive and active ways to secure unattended workstations and protect patient data. Fade to Lock gradually fades a user's screen before securing their desktop based on the time policy established by the administrator and the specific desktop's location. The fading screen passively alerts clinicians to click or nudge their mouse to keep their session open. For a more active approach, Imprivata OneSign Secure Walk-Away[®] uses 3-dimensional facial recognition and presence detection to automatically lock a user's screen when they step away and unlock their screen when they return. Both approaches protect PHI while avoiding workflow disruptions and frustration caused by short timeouts.

Integration and interoperability with EHR and clinical systems

Imprivata OneSign has been integrated and deployed with all the leading EHRs and with most of the more specialized solutions and clinical applications. Imprivata OneSign also provides tight integration with a specific EHR connector for Epic to support Epic specific workflows.

Ease of deployment, application profiling, and keeping up-to-date

One of the key advantages of Imprivata OneSign is how relatively easy the solution is to deploy and keep current. It's easy to enable new applications for single sign-on and keep application profiles and Imprivata OneSign software up-to-date. The Imprivata Application Profile Generator (APG) has an intuitive Graphical User Interface (GUI) that enables administrators to use "drag and drop" functionality to easily profile applications. Imprivata also makes regular updates to Imprivata OneSign, adding new capabilities, and seamlessly accommodating new releases from EHR, virtualization, and desktop partners, as well as from other technology vendors.

Complete monitoring and simplified reporting

Imprivata OneSign records all local and remote network authentication and application access events in a centralized database within a hardened virtual or physical appliance. The Imprivata Appliance provides out-of-the-box reports that give administrators full visibility into system and application access and enables rapid response to audit inquiries that would otherwise require IT professionals to perform manual, time-consuming examinations of multiple system or application logs.

KLAS Category Leader for single sign-on – 2015/2016

Imprivata OneSign is recognized by KLAS in the 2015/2016 Best in KLAS Awards for software and services as the category leader for single sign-on. The American Hospital Association also awarded Imprivata OneSign the exclusive endorsement for its ease of use in supporting hospitals in the implementation of EMRs in an environment that ensures appropriate, secure and compliant access to patient health information.

“Our providers, including nurses and staff, just embraced this technology. It’s just so easy to use. I would fear to have to take it away from them.”

- Todd Smith, VP & CMIO,
HealthEast Care System

About Imprivata

Imprivata® (NYSE: IMPR), the healthcare IT security company, provides healthcare organizations globally with a security and identity platform that delivers authentication management, fast access to patient information, secure communications, and positive patient identification. Imprivata enables care providers to securely and efficiently access, communicate, and transact patient health information to address critical compliance and security challenges while improving productivity and the patient experience.

Integrated platform-level solution

Imprivata OneSign integrates with other Imprivata and partner solutions that enable healthcare providers to access, communicate, and transact patient information both securely and conveniently. Advanced integration provides secure communication and transaction authentication for clinical workflows and enables Imprivata OneSign users to securely access clinical systems on premise, in remote locations, and in virtual environments.

Other Imprivata solutions integrated with Imprivata OneSign include:

- **Imprivata Cortext®** – the secure, integrated communications platform for healthcare that enables healthcare organizations to replace pagers, improve care coordination, and increase provider and patient satisfaction. IT administrators can automatically set up Imprivata OneSign users with a secure, HIPAA compliant, texting and communications capability.
- **Imprivata Confirm ID™** – the comprehensive identity and two-factor authentication platform for remote access, electronic prescribing of controlled substances, medical device authentication, and clinical workflows such as medication ordering, witnessing medication wasting, CPOE, blood administration, and others. Imprivata Confirm ID leverages the same infrastructure as Imprivata OneSign, which reduces complexity and TCO, and the same Imprivata OneSign credentials² can be leveraged across each of these solutions.

Why choose Forward Advantage as your Imprivata OneSign reseller and deployment partner?

With more than 25 years of healthcare experience and a deep understanding of clinical workflows, Forward Advantage offers an exceptional customer experience from purchase through implementation and beyond. Our professional services are customizable to meet each customer's unique needs so you and your providers can spend more time on what really matters: improving patient health.

Let Forward Advantage help make your goals a reality. Talk to one of our solution experts today!
