

# Imprivata Confirm ID for Remote Access

Secure and convenient two-factor authentication for the healthcare enterprise

## Key benefits

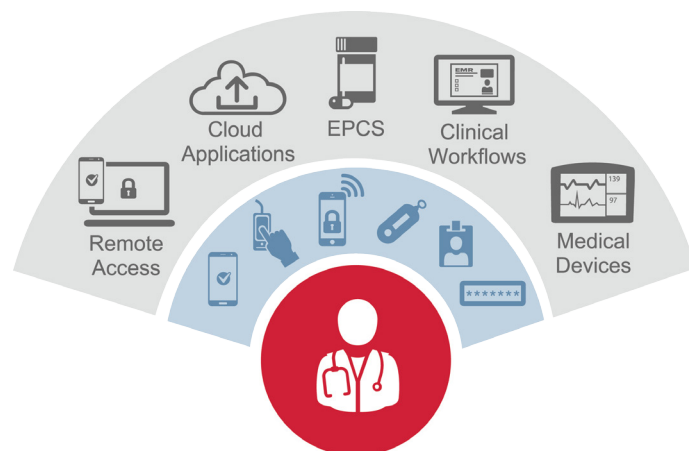

- Improve security by enabling enterprise-wide two-factor authentication for remote network access, cloud applications, and Windows servers and desktops
- Make security invisible to users with innovative and convenient authentication methods such as push token notification
- Streamline reporting and simplify authentication management with a single, centralized identity and authentication platform for all enterprise workflows

Imprivata Confirm ID for Remote Access is a secure and convenient two-factor authentication solution purpose-built to meet the critical security and workflow challenges of today's healthcare enterprise.

Healthcare continues to be victimized by large-scale, high-profile data breaches, and hackers are employing highly targeted, sophisticated, social engineering techniques to gain access to patient records and other sensitive data.

Imprivata Confirm ID for Remote Access improves security by enabling two-factor authentication for remote network access, cloud applications, and other critical systems and workflows.

Imprivata Confirm ID also offers convenient authentication methods such as push token notification that can be leveraged across workflows, allowing organizations to add a layer of security that is familiar, fast, and efficient for users.

“Imprivata Confirm ID allows physicians to securely but conveniently access patient information from anywhere. The push token notification is quick and easy, so users can stay focused on the task at hand.”

- Dr. Anthony Carbone, CMIO  
at Genesis Health System

### Improve security across the enterprise

Imprivata Confirm ID for Remote Access improves security by delivering holistic, enterprise-wide two-factor authentication across critical business, IT, and clinical workflows, including:

- Remote access gateways — Imprivata Confirm ID integrates seamlessly with VPNs and remote access gateways from Citrix, Cisco, VMware, and other leading providers to enable fast, secure two-factor authentication and safeguard against unauthorized network access
- Cloud applications — Imprivata Confirm ID integrates with Microsoft ADFS to enforce two-factor authentication when users access cloud applications. This improves security as hospitals move PHI, employee data, financial records, and other sensitive information into the cloud.
- Windows servers and desktops — Imprivata Confirm ID enables two-factor authentication for administrator access to ensure only authorized users can access Windows desktops and servers. This safeguards against attempts by hackers to access these critical systems using credentials obtained through phishing or other cyberattacks.

### Fast, convenient push token notification

Through convenient push token notification, Imprivata Confirm ID for Remote Access enables the enforcement of two-factor authentication with a workflow that is fast and efficient for users.

Employees enter their username and password as the first factor of authentication, and Imprivata Confirm ID will then send a notification to the user's mobile phone, asking them to verify their identity. Users simply approve the notification from the lock screen of their device, and the second factor of authentication is complete. They are not required to unlock their phone or manually type a token code, and they don't have to carry a hardware token fob (though these methods are supported if necessary).

In addition, Imprivata's push token notification meets DEA requirements for two-factor authentication for electronic prescribing of controlled substances (EPCS), allowing physicians to access the hospital network and prescribing controlled substances remotely using the same convenient, secure, and compliant authentication method.

Alternatively, if users do not have the push token functionality available, Imprivata Confirm ID for Remote Access supports additional authentication methods such as conventional software tokens, SMS text, and temporary codes generated by IT administrators. This increases flexibility to meet the requirements of various user authentication workflow scenarios while maintaining security.

### **Flexible user self-enrollment**

Imprivata Confirm ID for Remote Access allows users to self-enroll their mobile device from any device, anywhere.

If users have access to a system with an Imprivata agent, enrolling becomes even easier. An employee simply downloads the Imprivata ID application from the Apple App Store or Google Play and is invited to enroll the app when using the remote access gateway. This allows organizations to more quickly and efficiently scale the enforcement of two-factor authentication for remote access to the entire enterprise.

### **Imprivata Confirm ID: The comprehensive identity and multifactor authentication platform for healthcare**

Imprivata Confirm ID for Remote Access is part of a comprehensive identity and multifactor authentication platform for fast, secure authentication workflows across the healthcare enterprise. Imprivata Confirm ID makes security invisible by offering a broad range of innovative, convenient, and DEA-compliant authentication methods, including Hands Free Authentication, push token notification, and fingerprint biometrics.

Imprivata Confirm ID combines security and convenience by enabling fast, secure authentication across enterprise workflows while creating a secure, auditable chain of trust wherever, whenever, and however users interact with patient records and other sensitive data.
