

Imprivata Privileged Access Management

Protect your most sensitive accounts with simplified privileged access management from healthcare's most trusted digital identity provider

Privileged access management (PAM) is crucial to improving an organization's security posture and implementing an effective zero trust approach.

The misuse or hijacking of privileged and shared accounts, poor authentication, and/or lack of control over administrator access can lead to devastating security breaches – putting your business and sensitive information at risk. In fact, studies show that more than 70% of data breaches involve compromised or otherwise abused privileged credentials.

That's why Imprivata now offers PAM as a key component of the Imprivata portfolio of digital identity solutions. Extending access control to administrators and others who have access to privileged accounts – the “keys to the kingdom” – helps you improve security, meet regulatory compliance and audit requirements, and continue to increase your organization's digital identity maturity.

Key benefits

- Improve security by protecting unauthorized access to privileged accounts
- Meet regulatory compliance and audit requirements
- Reduce TCO through fast, simplified deployment and easy management
- Improve security with integrated multifactor authentication

Imprivata Privileged Access Management: comprehensive, enterprise PAM

Imprivata Privileged Access Management is a comprehensive, easy-to-use PAM solution that protects privileged accounts from unauthorized access. Imprivata Privileged Access Management includes Imprivata Enterprise Password Vault to securely store credentials, a robust job engine to rotate passwords and discover privileged accounts, and a session manager to broker access to-and-from various systems and records. The combination of these and other features equip you with a complete, enterprise-grade PAM solution.

Minimize the risk of data breaches associated with compromised privileged credentials

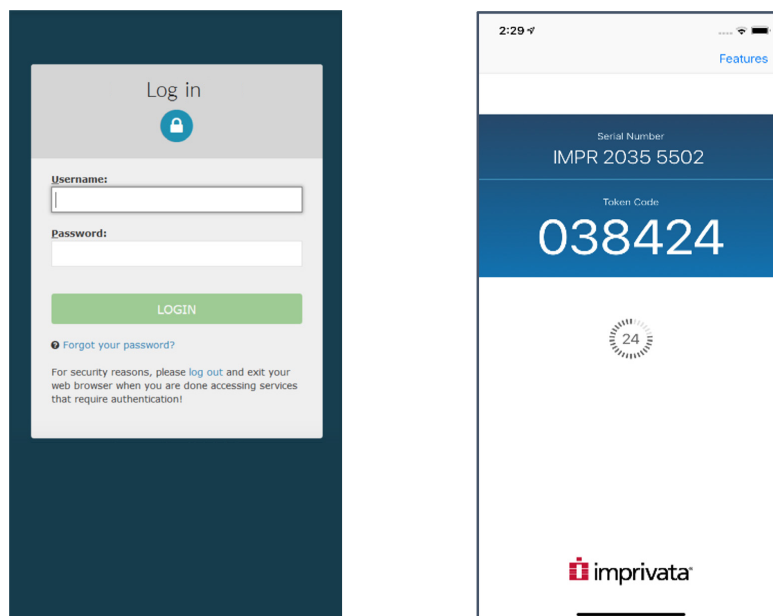

Imprivata Privileged Access Management incorporates the principle of least privilege to limit attack surfaces by providing just enough access to complete a task through granular policy control at the system level. The solution secures and automates privileged password discovery, management, and rotation, and automatically randomizes, manages, and vaults passwords and other credentials for administrative, service, and application accounts. This delivers a comprehensive PAM solution for limiting your attack surface and minimizing the risk of stolen or compromised privileged credentials.

“ [Imprivata Privileged Access Management] is a really strong solution, with a huge feature set, and it is easy to get up and running. ”

Principal Security Architect

Enable out-of-the-box multifactor authentication through seamless integration with the Imprivata digital identity platform

The combination of Imprivata Privileged Access Management with the broader Imprivata portfolio of digital identity solutions delivers a complete access control solution from a single, trusted vendor. This includes out-of-the-box integration with Imprivata Confirm ID to enable multifactor authentication for administrative access. This eliminates the needs to purchase, implement, and manage a separate vendor for multifactor authentication, which reduces cost, lowers TCO, and consolidates vendor management.

Improve ROI and reduce TCO with simplified deployment

Imprivata Privileged Access Management is a lightweight solution that is fast and easy to deploy. Legacy PAM solutions are complex, and implementation is time-consuming and resource intensive – often taking many months and requiring costly engagements with outside consultants. Imprivata Privileged Access Management uses a modern architecture and is completely agentless with zero client and server footprint, allowing organizations to download the software and being deployment in just minutes. This easy-to-implement approach improves ROI, decreases total cost of ownership, and allows your organization to quickly begin realizing the benefits of a PAM solution.

Meet regulatory compliance and security audit requirements

Imprivata Privileged Access Management helps satisfy crucial controls across multiple compliance regulations and security audits. The solution isolates, monitors, records and audits privileged access sessions, commands, and actions. It centrally collects, securely stores, and indexes account access, keystroke logs, session recordings, and other privileged events. This helps meet various compliance requirements for regulations such as HIPAA, GDPR, HITRUST, PCI, SOX, NIST and others, while also helping to streamline and simplify the security audit process.

“ [Imprivata Privileged Access Management] strikes an impressive balance between enterprise-grade features and a lightweight deployment. ”

Systems Integrator

The screenshot displays the 'Audit Log' interface. At the top, it says 'Audit Log' with a notification icon. Below that is a breadcrumb 'Home / System Audit Log'. The main section is titled 'System Audit Log' and shows 'Found 123 audit log records.' There are filters for 'Time: Last Day', 'Category: Any', and 'Level: Any', along with a 'Columns' dropdown and refresh/refresh icons. Below the filters, there is a 'Show 50 entries' dropdown and a search box. To the right of the search box are buttons for 'CSV', 'PDF', 'XLSX', 'PDF Protected', 'CSV Protected', and 'XLSX Protected'. Below this, it says 'Showing 1 to 50 of 123 entries'. The main content is a table with columns: Time, User, Object, Category, Level, and Event. The table contains several rows of audit records.

Time	User	Object	Category	Level	Event
