

Six signs you need a privileged access management system

You wrote the admin password on the office whiteboard

The Wi-Fi password was already there, but the admin password crossed the line.

Your employees carry excel files with passwords

You might even distribute some of them yourself as part of the new employee onboarding process.

Contractors work remotely to maintain your equipment

Someone even found an operating modem in the data center to provide access for one of the vendors.

You need to comply with regulations

You noticed an auditor in the office but you're not sure if it's about NIST.SP.800-171, NIST.SP.800-53, ISO 27001, HITRUST, or 21 CFR Part 11.

You do not remember changing factory default passwords

Who would have known that a surveillance camera has a password?

You call your admin too often

Why does it take an admin to generate a quarterly delinquency report?
